

Smart Wi-Fi Water controller | Battery powered |  
Automatic full irrigation or misting option | Auto "Shut-off"

QN-WWR01

Connects in your app with the use of a gateway (Included)

Gateway can be used as an extra smart switch.

Watering or mist option

Rain delay when watering is not needed

Water usage measuring

Auto shut-off to prevent wastage

Set up timers and schedules

Combine in "Flows"

Voice control

## Specifications

Wireless connection	WiFi
Frequency range	2412-2472 MHz
Communication protocol	TCP/IP,HTTP,DHCP,DNS
Subfrequency	RF 433MHz
Radio transmit power	17 dBm
Antenna gain	3 dBi
Socket Input voltage	220-240V AC 50Hz
Socket Output voltage	220-240V AC 50Hz
Socket Input current	16A
Socket Output power	3680W
Regulator power	4x AA/R06 1.5V
Grounding	Schuko type E
Device power output connection(s)	Type E (CEE 7/5)
Device power input connection(s)	Type E (CEE 7/6)
Inlet thread	1" inlet with 3/4" adaptor
Outlet thread	3/4" outlet
working water pressure	0.5 > 5 bar
Functions	Working water flow 5L/min to 35L/min Maximum 3 times watering per day Irrigation Mode: Watering frequency every day or any day Irrigation Mode: Watering time: 1min to 11 h 59 m Mist Mode: Mist Period: 1min to 11h 59m Mist Mode: Interval maximum 15min 59s 10 day water flow memory
Material	Plastic
Energy consumption	0.1 kWh
Available for qnect home app on iOS and Android	
IP rating	IP20 (Socket) IP54 (Regulator)
Operating temperature	-20 ~ +50° C
Color	Grey & Green
Dimensions regulator	154 x 102 x 45 mm
Dimensions socket	

## Features

- # Plug & play: Connect the gateway to your home network and add the water controller to your gateway.
- # Effortlessly activate it within the "qnect home" app, your voice or the physical button on the controller.
- # Use the "qnect home" app to set timers for automatic on or off water flows. Have your irrigation system, your mist fan or swimming pool water completely under control.
- # Time the water flow and check any water use for the past 10 days.
- # have the water controller react on the weather. Is there a rain forecast? Then the water controller will not switch on at the programmed time.
- # Automatic Shut off: Never fear your garden will be flooded.
- # The indoor gateway also works also as a socket. Control your water pump or any indoor device with this WiFi socket.
- # Combine with other "qnect home" products: switch this smart water controller on or off during the summer, to activate your mist fan or swimming pool water, when entering the garden (using a door contact or smart camera)
- # Works with Amazon Alexa, Google Assistant and Siri Voice.

## Commercial

With the "Qnect Home" smart water controller you activate your irrigation system via your Smartphone, your Voice assistant or the integrated button and let it switch off automatically. You can also quickly and easily set schedules in the "qnect home" app, and have your garden and patio plants watered completely automatically. This turns a simple outdoor tap into an intelligent water source for you and your lawn and plants - even when you're on vacation.

Very easy to set up. All you need is a stable WiFi network. Connect the Hub to your network and link the water controller. With our intuitive app you can quickly setup this water controller in no time.

Ready to use immediately. Compatible with all common hose systems and distributors, e.g. from Gardena, Hozelock or Kärcher. Fits all common water connections with a screw thread of 26.5 mm.

Set up to 3 irrigation times daily with automatic shutdown. Keep an eye on your water quantities via the consumption calculation. Water wastage and flooding due to oblivion are forgotten times: After you manually start an irrigation, the water flow automatically switches off after a time you have set.

Are you on vacation and the weather forecast reports a heat wave at home? No problem with this water regulator you always stay connected and you can easily water your garden on the go. And if you've set schedules, but the weather is a bit more rainy than expected, you can always stop them along the way, or have them automatically shut off or slow down.

Combine this extension socket and other "qnect home" products together in one app, without the hassle of complicated installations. In this case, in combination with "qnect home" sensors or cameras, you can automatically turn off your sprinkler system when your dog walks outside.. And this without you having to do anything. Handy, right!
